Project Requirements / Evaluation Rubric (Functionality)

Global UI Rule: Selection lists or pop-up modals must be disabled in edit mode; modifications are only allowed during the creation of a new record.

Screen	Procedure / Test Case	Expected Outcome / Observable	Weight (%)
Roles	Create Cashier and Waiter roles. Create an inactive Barista role.	Active and inactive roles are created.	**5%**
Employees	Create two employees and assign the Cashier and Waiter roles respectively. Validate that an inactive role **cannot** be assigned.	Employees are created and inactive role assignments are restricted.	**10%**
Feature Types	Create two types (one active and one inactive). Configure regular expressions (e.g., for numeric validation).	Active/inactive types are created and regex validations are set up.	**5%**
Features	Create two features. Validate that an inactive type **cannot** be assigned. Assign both features to the same active type.	Features are created while validating the status of the assigned type.	**10%**
Discount Types	Create two discount types and set discount limits for each.	Discount types are created with distinct amount/percentage	**5%**

		limits.	
Discounts	Create two discounts, applying a different type to each. Assign an expiration date to one and leave the other with an open-ended range.	Discounts are created with open-ended and closed date ranges.	**10%**
Product Types	Create two types (one active and one inactive).	Active and inactive product types are created.	**5%**
Products	Create two products with suggested prices and assign them to the active type (must not allow linking to an inactive type). Add a feature to each, validating against the regex. Assign discounts while validating amount limits and date ranges.	Products are created with valid data, passing regex validation and discount limits/dates.	**20%**
Orders (Scenario A)	Create an order, filtering employees so only those with the Waiter role can be selected. Select a date outside the date-limited discount range. Add products and apply discounts: the expired-date	Validates that date-restricted discounts only apply within their valid range.	**10%**

	discount **must not** apply, but the open-ended discount must apply with its correct amount and comment.		
Orders (Scenario B)	Create a second order, selecting a date within the valid range of the date-restricted discount. Apply both the date-restricted and open-ended discounts. Both should calculate and display their respective amounts and comments.	Confirms accurate calculation of amounts and enforcement of multiple discount rules.	**10%**
